

## Knock Out! (All Ages)

In a small grid, have players attempt to knock the ball away from other players. If a player's ball is knocked out of the grid, the player is eliminated. The last player left possessing their ball wins!

### Variations:

1. Allow eliminated players to re-enter the grid if the player who kicked their ball out is eliminated.
2. Designate one player without a ball to knock out other player's balls. If a player's ball is knocked out, they too try to knock other players' balls out.
3. Allow eliminated players to re-enter the grid if they, as they stand outside the grid, are able to control a ball that has been kicked out before it stops. This is a better variation because it keeps the players involved and gets them more touches.
4. Create gates for players to safely exit the game from, but be sure they re-enter at the next available gate.

### Focus:

Players should focus on keeping their heads up and the ball close to their body and under control. They should also begin to develop moves to avoid defenders.
